

⚠️ Think Before You Click ⚠️

Many young people don't realise that some online actions can be criminal offences, with consequences that can impact their education, future careers, travel opportunities, and more.

From unauthorised access to systems and data to making purchases without permission or taking part in DDoS attacks, even "low-level" cybercrime can have serious repercussions.

Parents, teachers, and carers play a vital role in helping young people understand the risks and make positive cyber choices. With skills in coding, gaming, and cybersecurity in high demand, there are countless opportunities to turn digital talent into a rewarding career.

- ✓ Educate
- ✓ Support
- ✓ Inspire

Let's work together to help young people stay safe online and use their skills for good. For help and resources head to - [Cyber Choices](#)
